P220G2SWH	LamClad G2S .220" 4x8 White	-	each	100

Drawer Sides - Custom Ready To Assemble

The Drawer

The BHK Drawer System is a high quality, precision manufactured, ready to assemble drawer system. The drawer is cut, mitered and grooved with exacting precision to customer specifications. All BHK drawers are sealed in an abrasion-resistant DuraWrap surface that stays on for keeps and is easy to keep clean. This special sealing process ensures surface uniformity without the worry of wrinkles and bubbles or surface edges that peel apart. BHK drawers are delivered ready for on the spot assembly and installation.

Benefits

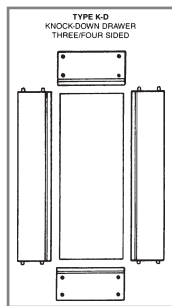

Since BHK drawers are less expensive than shop made drawers, you save time, labor and money. BHK is the largest U.S. manufacturer of RTA drawer systems. BHK drawers are available with matching bottoms and a choice of profiles (pictured, bottom right). The BHK product line is available in a selection of 17 colors including woodgrains.

K-D: DuraWrap & Wood

Ideally suited for all types of RTA furniture, the K-D drawer is available either three- or four-sided and in a variety of configurations. Comes drilled and dove-tailed, dovetail or rabbet and can be machined to accept most fasteners.

Blanks: DuraWrap & Wood

Take a BHK blank, make four straight cuts. Fasten with staples, screws or drilling and doweling. Just a few simple cuts and you have a quality finished drawer.

Miterfold

Insert drawer bottom into precut grooves on two sides. Fold drawer sides around matching drawer bottom. Close remaining drawer side onto dowels (Miterfold available in DuraWrap only). See Figure 1.

Drawer Component Reference Guide

Type I Three Sided Drawer is the most economical drawer available, while Type III Four Sided Mitered Joint Assembly Drawer shows no exposed edges after assembly, and both are well suited for use with Softline or Hex Cut Profiles. Type II Four Sided Butt Joint Drawer features minimal assembly labor while Type IV Two Part Butt Joint Drawer is specifically designed for miterfold drawers more than ten feet in total length. Both facilitate easy adjustment of front piece after cabinet assembly. Type K-D is specially designed for RTA type furniture applications.
